

Lin & Associates' LoopWatch Monitor

Lin and Associates' LoopWatch Monitor tool assists the operator in becoming more effective in mitigating potential process upsets and/or adhering to quality targets. LoopWatch allows an operator to observe critical process variables without having to build a unique graphic or group. LoopWatch collects desired process values and uses a custom algorithm to effectively call attention to deviations.

Key Benefits

- **Enhance mitigation of process upsets**
 - Visual indication of high/low deviation from historical values
 - Collect and automate analysis of process values to effectively call attention to deviations
- **Adhere to quality targets**
 - Customizable boundary limits (per point) set to predict current trend
- **Improve focus and operator efficiency**
 - Right-click functionality to adjust trend time, invoke point's details or Primary Control Display
 - Monitor various parameters like PV & OP
 - Keep an eye on critical process variables without pre-building a unique graphic or group.
- **Included Tools**
 - Lin & Associates' Application Center to configure style and alarm indication colors
